

with arbitrary extensions inside arbitrary locations, e.g., automatic startup folders. By manipulating, the Caption Property is possible to create a valid application with ".hta" extension.

User interaction is required to exploit this vulnerability in that the target must visit a crafted web site.

4. Recommendation

1. AegisLab IDP signature database can prevent this attack since 3/11/2011.
2. Upgrade to the latest non-affected version of the software.
